

Multi-Column Layout Test Document

LEFT COLUMN TEXT

This is the left column of a two-column layout. The extraction system should be able to identify and correctly order text from multi-column documents.

Column detection is one of the challenges in PDF text extraction. Without proper handling, text from both columns may be interleaved incorrectly.

The left column continues with additional content to provide more test data for validation purposes.

RIGHT COLUMN TEXT

This is the right column of the same document. It runs parallel to the left column and contains its own distinct content.

Multi-column layouts are common in academic papers and research journals. A robust extraction system must handle these layouts gracefully.

The right column also has additional lines of text to ensure comprehensive testing of the extractor.
